Key Findings

- Wazuh successfully detected both Atomic Red Team simulations.
- Wazuh mapped both alerts to the generic execution technique (**T1059.003 – Windows Command Shell**) because it detected the execution of `cmd.exe`.
- The AI analysis examined the command-line arguments and correctly inferred the original Atomic Red Team techniques (**T1016** and **T1083**).
- Human verification confirmed that both detections were expected and originated from authorized lab simulations.
- This demonstrates how AI-assisted triage can enrich Wazuh alerts with more accurate contextual analysis while retaining human oversight.
